This course examines world history from human origins to end of the 13th century CE. By looking at history from a global and comparative lens, students will develop both a complex understanding of the variety of cultural, political, social, economic, and religious systems that prevailed in different world regions at different times and an appreciation of the universal elements of human societies and the patterns of development and change. We will look at world history from early human migrations, through the development of agriculture and pastoralism, to the construction of states and empires in Afro-Eurasia, the Americas, and the Trans-Pacific. We will consider the changing nature of political authority, social organization, systems of production and exchange, and religious beliefs and practices. Students will gain a deeper appreciation of the ongoing formation of historical knowledge and direct experience with the interpretation of primary historical sources.
