A. COURSE DESCRIPTION

Credits: 3
Lecture Hours/Week: 1
Lab Hours/Week: 4
OJT Hours/Week: *.*

Prerequisites:
This course requires all three of these prerequisites
   RADT 2601 - Introduction to Radiologic Sciences
   RADT 2617 - Clinical Practicum 1
   RADT 2611 - Radiographic Positioning and Procedures 1

Corequisites: None

MnTC Goals: None

This is the second procedures course. In this course the student will be introduced to positioning of the vertebral column to include the sacrum and coccyx, and the bony thorax. Students will also learn fundamental positioning of the skull, facial bones and paranasal sinuses. Labs will enable the student to become familiar with positioning using the x-ray machine. The student will explore in greater detail; pediatric radiographic positioning. Principles of radiation safety with emphasis on protection of the technologist and patient will be stressed. Radiographic images will be evaluated for anatomy and positioning. (Prerequisites: RADT2601, RADT2611, RADT2617) (3 credits: 1 lecture/2 lab)

B. COURSE EFFECTIVE DATES: 06/16/2009 - Present

C. OUTLINE OF MAJOR CONTENT AREAS

1. Successfully perform radiologic procedures of the femur, pelvis, spine and bony thorax
2. Successfully perform radiologic procedures of the skull, facial bones, and sinuses
3. Explore routine radiographic positioning of pediatric patients
D. LEARNING OUTCOMES (General)
   1. Describe standard positioning terms and general considerations
   2. Discuss patient considerations when performing radiologic procedures
   3. Simulate radiographic procedures on a person or phantom in a laboratory setting
   4. Explain radiographic procedures to patients/family members
   5. Apply general radiation safety & protection practices associated with radiologic examinations
   6. Perform radiologic procedures of the spine
   7. Identify radiographically significant spinal anatomy
   8. Evaluate radiographic spinal image quality
   9. Perform radiologic procedures on the bony thorax
  10. Identify radiographically significant bony thorax anatomy
  11. Evaluate radiographic bony thorax image quality
  12. Perform radiologic procedures on the skull, sinuses, and facial bones
  13. Identify radiographically significant skull, sinus, and facial bone anatomy
  14. Evaluate radiographic skull, sinuses, and facial bones for image quality
  15. Explore routine radiographic positioning of pediatric patients
  16. Explore alternative methods of radiographic positioning on pediatric patients
  17. Describe imaging procedures on trauma patients

E. Minnesota Transfer Curriculum Goal Area(s) and Competencies
   None

F. LEARNER OUTCOMES ASSESSMENT
   As noted on course syllabus

G. SPECIAL INFORMATION
   None noted
